

Concrete Protection & Restoration Pratt Street — Garage Repairs

Project Scope

The Pratt Street Garage repair consisted of many phases in which restoration included all the topside slab repair, major underside repair, full depth repair and slab on grade repair work. The project scope of work consisted of removal and replacement of the existing topping slabs at levels P-1 thru P-9 as well as miscellaneous concrete repairs to all pre-cast double T's and beams. CP&R was also in charge of replacing all of the expansion joints and coating at the expansion joints thru these same levels. The Pratt Street Garage repair was successfully completed despite its challenge of having to be completed throughout many different phases and its need to remain active during the completion of its repair.

Location

Baltimore, Maryland
